Sheldon Dick

[Note: There are two photographs on the LC website: LC-USF344-040492-B; LC-USF345-040493-A, which are designated “[Untitled]” with “No digital image available.” No caption list information is available. These numbers were not seen on fiche. Within the context of other Dick photographs and numbers, these may be his photographs, but it is difficult to determine this.]

Photograph of Sheldon Dick:
[Sheldon Dick, Farm Security Administration photographer, half-length portrait, holding camera, facing front.] May 20, 1939.
Photograph by Janina Lester. LC-USZ62-121076.

Amity Hall
Billboard advertising Amity Hall

[Interior of men’s living quarters]?
LC website: Untitled: fsa 8c02104 : LC-USF34-040140-D.
Note: No caption list information available; not seen on fiche or microfilm.

Interior of the men’s wash room at Amity Hall, Harrisburg (vicinity), May 1938.
LC website: fsa 8c02103 : LC-USF34-040139-D.
Fiche no. 162.
Microfilm: Lot 1350, Reel 81.

Pennsylvania billboard advertising Amity Hall, Harrisburg (vicinity), Summer 1938.
LC website: fsa 8c02105 : LC-USF34-040141-D.
Fiche no. 46.
Microfilm: Lot 1350, Reel 81.
LC website: LC-USF34-040141-D.
Note: Fiche title: “Billboard advertising Amity Hall.”

Sign near Amity Hall, near Harrisburg, 1938.
LC website: LC-USF33-020087-M 3.
Microfilm: Lot 1350, Reel 81.
Note: LC: No digital image available. Original negative missing. LC website indicates “Lancaster County or vicinity, Pennsylvania. Various uncaptioned rural scenes, signs, etc.”

Title from caption list. Not seen on fiche. Image available on microfilm.

Arendtsville Vicinity
[Note: Arendtsville misspelled in some captions as Arentsville.] A round barn of Sheely farm, Arendtsville (vicinity), Adams County, July 1938.
LC website: fsa 8c02044 : LC-USF34-040072-D; fsa 8c02045 : LC-USF34-040073-D.
Fiche no. 8.
Microfilm: Lot 1350, Reel 81; Lot 2315, Reel 106.

Barto, Barto Vicinity
Barn on the farm of Thomas G. Evans, (Farm Security Administration) client, Barto, Berks County, August 1938.
LC website: fsa 8c02164 : LC-USF34-040200-D.
Fiche no. 8.
Microfilm: Lot 1350, Reel 81; Lot 2315, Reel 106; Lot 2320, Reel 107.

Barn on the road between Thomas G. Evans farm, Barto, Berks Co., and Reading, 1938.
LC website: LC-USF33-020068-M 4.
Fiche no. 9: indeterminate numbering.
Microfilm: Lot 1350, Reel 81; Lot 2315, Reel 106; Lot 2320, Reel 107.
Note: Title with same numbering from caption list. LC title: “Lancaster County, Pennsylvania, Rural Scene.” LC indicates no digital image available. Original negative missing. LC also indicates that corresponding prints are available on Lots 1350, 2315, and 2320. Both Fiche no. 9 and Lots 1350, 2315, and 2320 have matching photographs of the front of a barn with hex symbols and horses painted on it and chickens on the ground in front of the barn. There is no information provided on any of these photographs. The photograph in Fiche no. 9 does indicate that it is mounted on temporary board, and temporary information is on the verso, but this information is not provided in the fiche copy. With the photograph in Lots 2315 and 2320, following the photograph, there is what may be the reverse, with an indication: “D157. Photo Mount, Department of Agriculture, Farm Security Administration.” Lot 1350 is photographs of Sheldon Dick taken in Adams, Berks, and Lancaster Counties. Lots 2315 and 2320 have the barn included as part of exhibitions mounted or considered on particular subjects. Photographs in those Lots are by different photographers all over the country, including Pennsylvania. John
Collier and Edwin Locke also took photographs of barns with hex symbols, but they are different barns.

[Cattle in barn on the farm of Thomas G. Evans, Barto, Berks County]?  
LC website: Untitled: fsa 8c02161 : LC-USF34-040197-D.  
Note: No caption list information available; not seen on fiche or microfilm. Photograph and numbering within context of other Evans photographs.

Corn crib on the farm of Thomas G. Evans, an FSA client, Barto, Berks County, August 1938.  
Fiche no. 222 : LC-USF33-20072-M 3.  
Microfilm: Lot 1350, Reel 81.  
Note: No indication of photograph in LC website.

Dick Evans, Thomas Evans' elder son, Barto, Berks County, August 1938.  
LC website: Untitled: fsa 8c02154 : LC-USF34-040190-D.  
Note: No caption list information available. Title taken from LC website. Not seen on fiche or microfilm. Photograph is in series between those taken in Barto and Maytown, and it is difficult to determine location. LC website does not indicate place, but does indicate that photograph is taken by Dick, with date indicated as 1938?

Dick Evans throwing chaff out of the Evans' barn, Barto, Berks County, August 1938.  
LC website: Untitled: fsa 8c02159 : LC-USF34-040195-D.  
Note: Title taken from caption list. Not seen on fiche or microfilm.

Dutch farm wagon on the farm of Thomas G. Evans, an FSA client, Barto, Berks County, August 1938.  
LC website: LC-USF33-020080-M 5.  
Fiche no. 175.  
Microfilm: Lot 1350, Reel 81.

Philadelphia

Office of Price Administration's (OPAA) Philadelphia enforcement attorney (no name available) hands out questionnaires to volunteer women investigators in last weeks (week of June 7, 1942) drive to check price ceiling and rationing violations in test spots: New York, Newark and Philadelphia. June 1942.

LC website: fsa 8b06813 : LC-USEn-D-010502. Lot 1957.
Posed photograph at a department store in Philadelphia, with volunteer woman investigator checking for Office of Price Administration's (OPA) enforcement agency prices of lingerie and hosiery. 1942 or 1943.

Volunteer woman investigator for the Office of Price Administration (OPA) enforcement agency in Philadelphia, one of three cities selected in a test drive to discover violations of rationing and ceiling prices, in a department store checking prices of women's apparel. All investigators were required to fill out reports, regardless whether violations were uncovered or not. A number of complaints against law violations in three test cities resulted from the surprise investigation. 1942 or 1943.

Philadelphia: Frankford Arsenal

Checking an inside diameter of a cartridge case with one of the glass gauges which replace steel gauges at the Frankford Arsenal. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

Checking the outside diameter of a gear with one of the glass ring gauges, that are replacing steel gauges at the Frankford Arsenal. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

LC website: fsa 8b05656 : LC-US6-D-008199.

Glass gauges of various types are replacing steel gauges at the Frankford Arsenal. Left, top to bottom: double-end gauge, “go” plug gauge, ring gauge. Right, top to bottom: “not go” plug gauge, double and solid-handle plug gauge, double-end taper-lock standard, handle plug gauge. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

LC website: fsa 8b05659 : LC-US6-D-008202.

A glass ring gauge for the inspection of fuse parts. These gauges are replacing steel gauges at the Frankford Arsenal. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.
Inspecting a gear with a steel ring, since replaced by a glass gauge at the Frankford Arsenal. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

Markings are carried on a label pasted on the handle of a glass plug gauge, which replace steel gauges at the Frankford Arsenal. Markings on other gauges are produced by acid etching. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

A steel plug gauge is compared with a glass plug gauge which replaces it at the Frankford Arsenal. A plain ring glass gauge shows in the foreground. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

A steel plug gauge, since replaced by a glass gauge at the Frankford Arsenal, is shown checking an inside diameter of a cartridge case. Glass gauges are lighter and cheaper than steel, permit greater visibility in inspection, are not as much affected by room temperatures and heat of operators’ hands, are not corroded by perspiration, need no protection against rusting, do not acquire burrs that would change the effective sizes. They can save the annual use of 250 tons of critical tool steel in government arsenals alone.

YORK

Erstwhile elevator operator, this employee of a small Eastern plant finds a touch of similarity between levers of the old job and the new. But he’s one of America’s war production workers now, due to the company’s subcontract for war production.

Formerly producing floor waxing and polishing machines, this small Eastern factory is now one of the America’s myriad plants devoted to production of small machine parts for war purposes. Foreseeing possibilities of shortage of aluminum (necessary for polishing equipment), this factory’s owner sought defense subcontracts many months ago, he is now operating twenty-two hours a day with a crew of thirty workers, a distinct improvement over his previous eight hours, three-worker days.

He used to be a weaver and repair man for looms, but he’s one of Uncle Sam’s defense workers now. Employed by a small Eastern floor waxer manufacturing firm, this worker now spends ninety-nine percent of his time working on small parts for gun mounts.

He used to be a weaver and repair man for looms, but he’s one of Uncle Sam’s defense workers now. Employed by a small Eastern floor waxer manufacturing firm, this worker now spends ninety-nine percent of his time working on small parts for gun mounts. Here, however, he’s working on the remainder of the floor waxer stock left in the plant. Orders for the shop’s peacetime products can still be filled from stock, but no new waxes are being made.

He’s not drawing a bead on an enemy ship, but he’s hitting at the Axis just the same. Formerly a Work Projects Administration
Howard Hollem (Cont.)

Timekeeper (WPA), this employee of a small Eastern manufacturing firm is now producing small parts for America's war machine, due to the company's subcontract for defense work. LC website: fsa 8b01781 : LC-U6E-D-002471.

A modern Molly Pitcher of the machine, this secretary-treasurer of a small Eastern manufacturing company knows as much about drills and lathes as the eldest employee around the place. And it was in part through her foresight and initiative that this floor waxer plant was converted to war production. She's shown here with a youthful worker who is operating one of the recently converted machines. LC website: fsa 8b01767 : LC-U6E-D-002457.

No more floor polishers will be produced by this small Eastern manufacturing company, whose entire resources are being converted to defense production. Bench workers will henceforth be women, if the owner's plans are realized, so that his male operators can be released for heavy-duty machine work. LC website: fsa 8b01776 : LC-U6E-D-002466.

Normally used in manufacture of floor waxes, as shown here, this five-spindle drill press is now used full-time on defense orders for which this small Eastern plant is under subcontract. LC website: fsa 8b01771 : LC-U6E-D-002461.

Now making machine-gun cover plates, this machine was converted from a line shaft drive to motor drive when a small Eastern manufacturing company converted its product from floor waxes to small parts for war equipment. Unable to purchase new equipment for his defense work, the company's owner bought second hand equipment and remodelled it. Delivery of first orders was made thirty days after contract, an amazingly short time considering that conversion of the machinery took two weeks of it. LC website: fsa 8b01765 : LC-U6E-D-002454; fsa 8b01772 : LC-U6E-D-002462.

One of the few lathes bought by a small Eastern manufacturing firm. Unable to purchase much new machinery, the owner of the company installed and remodelled old equipment to produce war essentials under subcontract. First orders were delivered thirty days after contract, an amazingly short time considering that conversion of machines took two weeks of it. LC website: fsa 8b01779 : LC-U6E-D-002469.

The owner of this small Eastern floor waxer plant has planned for and almost completed conversion of his equipment to accommodate the defense production for which he has subcontracted. This five-spindle drill press, once used in manufacture of floor waxing machines, has been equipped with special chuck and drill for production of anti-aircraft guns. LC website: fsa 8b01766 : LC-U6E-D-002455; fsa 8b01780 : LC-U6E-D-002470.

The sugar shortage brought this worker back to the lathe. Employed now by a small Eastern manufacturing firm which used to make floor waxes but is now completely converted to war production, this worker had only a trade school course in mechanics taken fifteen years ago as background for his new job. He operated his own confectionery business until the sugar shortage forced him into a new field. But he's glad to be aiming gun-sight parts at the Axis. LC website: fsa 8b01763 : LC-U6E-D-002452.

These bench operators of a small Eastern floor-waxing equipment company are working on defense production, all but the worker at left. He's completing assembly of one of the few waxing machines left in the factory. LC website: fsa 8b01777 : LC-U6E-D-002467.

These twenty-year-old lathes are producing equipment for Uncle Sam's armed forces twenty-two hours a day. Alive to the possibilities of converting old equipment to defense usage, the owner of this small Eastern factory bought and remodelled old equipment which is proving its mettle in 1942. Note overhead power-driven machinery. LC website: fsa 8b01774 : LC-U6E-D-002465; fsa 8b01775 : LC-U6E-D-002465.

This drill press and all other machines of a small Eastern floor waxer company had to be rebuilt to accommodate defense production parts. Complete retooling was accomplished in two weeks, a phenomenally short time for this job. Credit for this speed falls to both management and workers who entered into the job in a “beat the Axis or bust” frame of mind. LC website: LC-U6E-D-002456.

Note: LC indicates no digital image available.

Through the skill and ingenuity of the entire personnel of this small Eastern manufacturing firm, machinery formerly used in production of floor waxes has been converted to production of war essentials. Pictured here are the shop's owner (right) and night

Through the skill and ingenuity of the entire personnel of this small Eastern manufacturing firm, machinery formerly used in production of floor waxers has been converted to production of war essentials. Pictured here is the night foreman employed by the company for fifteen years, who was instrumental in executing the changeover.

Ex-auto mechanic pictured at work in ex-lock factory. Merrill Darr, twenty-five, works on breech ring for a thirty-seven-millimeter gun. These guns and thirty-seven-millimeter gun mounts are now produced in a plant which formerly manufactured items for civilian use.

Ex-truck driver at work in ex-lock factory. Clyde Dahlberner is one of Uncle Sam's millions working for victory behind the men behind the guns. He's doing bench work on a breech ring for a thirty-seven-millimeter gun, present product of this factory.

Fixing up a grab-bag for Hitler. This worker packs thirty-seven-millimeter gun mounts in an Eastern factory formerly devoted to assembly of locks and safes.

Guns to blast the Axis from the earth. A factory which formerly produced locks and safes now produces thirty-seven-millimeter guns and gun mounts.

Note: LC indicates no digital image available for 2594.

He ran a lathe in '17, and he's running one for Uncle Sam again.

Harry Melhorn is one of America's soldiers on the second line of defense; he's producing thirty-seven-millimeter guns in a factory which formerly made safes and locks.

Listening for defects during the grinding of a powder chamber for a thirty-seven-millimeter gun for Uncle Sam's armed forces. Site of this production is a former lock and safe company now converted to manufacture of weapons for victory.

Millimeter guns for America's armed forces are assembled in a factory once devoted to manufacture of safes and locks.

Checking and inspection of thirty-seven-millimeter gun mounts for America's armed forces in a factory once devoted to manufacture of safes and locks for civilian use.
being assembled in a factory which once produced locks and
safes for civilian use.

Unidentified Army Camp

Smuda Family series
[Note: See also entries for the Smuda family at home during the
war under Howard Liberman: Frankford.]

Mrs. Smuda’s son. April 1942.
“Dear Mom….” Private Smuda writes to his mother from army
camp. She’s a member of that great army of American women
who work just as hard for victory over the Axis as their sons on
the front lines. Mrs. Smuda’s particular job is tapering cartridge
cases at the Frankford, Pennsylvania arsenal.
LC website: fsa 8b02630 : LC-U SE6-D-003718.

He used to drive a bakery wagon, but now he drives a truck for
Uncle Sam. Private Edwin Smuda at camp “somewhere in the
South” is one of America’s many fighting men with mothers who
are working just as hard for victory as they are. Mrs. Eva
Smuda, fifty-five, works eight hours a day in Frankford,
Pennsylvania’s arsenal where she tapers cartridge cases for 50mm
shells. Another mother and son combination that means death
to the Axis.
LC website: fsa 8b02635 : LC-U SE6-D-003724, fsa 8b02636 : LC-
USE6-D-003725.

The man with the gun. It’s Private Edwin Smuda at army camp
“somewhere in the South.” In addition to being a prize fighting
man, one of Private Smuda’s claims to fame is his widowed,
fifty-five-year-old mother who works six days a week in the
Frankford, Pennsylvania arsenal tapering cartridges for 50mm
machine gun shells. Mrs. Smuda is one of that great army of
American women who work just as hard for victory as their sons
on the front lines.
LC website: fsa 8b02633 : LC-U SE6-D-003721; fsa 8b02637 : LC-
USE6-D-003726.

Private Edwin Smuda of Frankford, Pennsylvania, one of Uncle
Sam’s fighting men, now at camp “somewhere in the South.”
Like many another U.S. soldier, Private Smuda has a mother
who is working just as steadfastly for victory as he is. Mrs.
Smuda tapers cartridge cases at the Frankford arsenal.
LC website: fsa 8b02639 : LC-U SE6-D-003717.

Peter Killian

Surplus farm products make possible free lunches for the under-
nourished children, Pittsburgh, 1940.

Dorothea Lange

Washington Vicinity
Old age, Washington (vicinity), July 1936.
Migratory worker in auto camp. Single man, speaks his mind.

“Them WPA's are keeping us from living. They oughtn't to do it. It ain't fair in no way. The government lays them off (that is in Work Projects Administration—1939) and they come in because they're locals and take the jobs away from us that never had no forty-four dollars a month. I came out of Pennsylvania, used to be an oil worker. I'm getting along in years now and I see lots of presidents and lots of systems. Voted for Roosevelt both times and I don't know of any president that ever leaned toward the laboring man like him, but this system they've got here in the fruit is a rotten system the way they work it.” Yakima Valley, Washington. August 1939.

Note: No caption list information for 11031-M 3 and M 4; not seen on fiche or microfilm. No specific place indicated.

Howard Liberman

Bethlehem

Negro steelworker(s). Bethlehem, May 1942.

Fred Heeben, veteran Negro worker employee of a large East Coast steel mill, is participating in his second world war production drive. This sixty-year-old war worker is shown on his bycicle rushing time cards and tools from one part of the massive steel plant to another. Bethlehem Fairfield Steel.

LC website: fsa 8b03046 : LC-USEn-D-004291.

One of the many Negro operators of narrow gauge locomotives that haul ingot and billet steel in the yards of a large East Coast steel mill is shown in the cab of his locomotive. Bethlehem Steel.

LC website: fsa 8b03042 : LC-USEn-D-004287.

This Negro worker operates a fifty-ton crane which reclaims iron out of slag in the slag drop of a large East Coast steel mill which is working full capacity to speed war Production. Bethlehem Fairfield Steel.

LC website: fsa 8b03044 : LC-USEn-D-004289.

This operator of a mobile hoist is one of the various Negro employees of a large East Coast steel mill which has turned its facilities to 100 percent war Production. Bethlehem Fairfield Steel.

LC website: fsa 8b03045 : LC-USEn-D-004288.

This skilled Negro worker is operating a wire-drawing machine which draws steel strips through a die into wire in a large East Coast steel mill. Bethlehem Fairfield Steel. Bethlehem, May 1942.

Frankford

Smuda Family series

[Note: See also entries under Howard Hollem of the Smuda Family, especially the son, Edwin, in the army and stationed at an undesignated place.]

Women at war (Mrs. Smuda). Frankford, March 1942.

Although she spends eight hours a day preparing ammunition for America's fighting forces, Eva Smuda has plenty of energy left after work to keep the lawn in shape.
Although she's one of America's vital production workers, eight hours each day, fifty-five-year-old Eva Smuda still finds plenty of time to devote to home and family. Before the rest of the household is up, she has breakfast on the stove. She's a mother and a grandmother, she works at a U.S. arsenal tapering shells for fifty-millimeter anti-aircraft guns and she loves listening to news broadcasts and Bing Crosby. Eva Smuda, fifty-five, who came to America from Poland at the age of three, has one son in the Army, and a son, daughter and a son-in-law working with her at the Frankford Arsenal.

Mrs. Smuda has reduced it to a system. Note that short handled shovel to make the job easier.

She's a mother and a grandmother, she works at a U.S. arsenal tapering shells for fifty-millimeter anti-aircraft guns and she loves listening to news broadcasts and Bing Crosby. Eva Smuda, fifty-five, who came to America from Poland at the age of three, has one son in the Army, and a son, daughter and a son-in-law working with her at the Frankford Arsenal.

Lititz

[Note: While not specifically mentioned, these photographs may be of the Animal Trap Company. Also see entries under Marjory Collins and Sheldon Dick.]

Armor-piercing bullet cores being gauged at the lathe on which they were produced in a converted Eastern animal trap plant. The lathe was secured second hand in Wisconsin, where it made machine bolts and spark plug parts.

LC website: fsa 8b03431 : LC-USE6-D-004659.

Buckets of cores for armor-piercing bullets form another “V” for Victory in a converted Eastern plant that was producing animal traps only a short time ago.

LC website: fsa 8b03442 : LC-USE6-D-004660.

Inspecting cores for armor-piercing bullets in a converted Eastern plant that formerly made animal traps. Every bullet must pass several tests for weight, profile, etc. Small and very accurate gauges are used by young women who have been trained as expert inspectors.

LC website: fsa 8b03443 : LC-USE6-D-004661; fsa 8b03444 : LC-USE6-D-004662.

Murals on the outside walls of this plant suggest production of animal traps. The plant is now converted to the making of armor-piercing bullet cores and other war essentials.

LC website: fsa 8b03338 : LC-USE6-D-004655.

Some of the traps made by an Eastern concern that specialized in these products during peace years. All the facilities of the plant are now devoted to the making of armor-piercing bullet cores, incendiary bomb noses, army cot parts and other war essentials.

LC website: fsa 8b03339 : LC-USE6-D-004656.

Conversion. Duck decoys to incendiary bomb noses. Lititz, April 1942.

Farewell to ducks. This worker sanding duck decoys on an emery belt will soon be producing war essentials. He is finishing up the last batch of decoys before using the same machine to perform an operation in the production of incendiary bomb noses.

LC website: fsa 8b03446 : LC-USE6-D-004664.

Polishing incendiary bomb noses on an emery belt that the same worker was using a short time ago to sand duck decoys for American sportsmen. A broad conversion in which a woodworker and woodworking machinery changed over to metal working.

LC website: fsa 8b03453 : LC-USE6-D-004663.

Conversion. Garden tools to army cot parts. Lititz, April 1942.

Army cot parts and garden trowels are dipped in a paint tank at the same time. The Eastern company doing the work is only partly converted to war production, because garden tools are regarded as necessary, too.

LC website: LC-USE6-D-004665.

Note: LC indicates no digital image available. Original negative missing.

Converting a punch press from the production of garden tools to the making of army cot parts. When the die is changed, the machine will begin its new job of producing for our men at the front.

LC website: LC-USE6-D-004666.

Note: LC indicates digital image not available. Original negative missing.

Philadelphia

Clothing for America’s expanding army is being made by garment workers throughout the country. This Quartermaster Corps Depot employee is turning out regulation neckties in mass production quantity.

Note: This is a color photograph. Not seen on fiche or microfilm. LC website indicates additional information on the photograph. LC website also indicates that B&W photograph is in Lot 12002-27.

White hot steel pours like water from a 35-ton electric furnace, Allegheny Ludlum Steel Corp., Brackenridge, 1941(?).
LC website: fsa 1835062 : LC-USW36-271.
Note: This is a color photograph. Not seen on fiche or microfilm. Additional information about the photograph provided on the website. LC website also indicates that B&W photograph is in Lot 12002-27.

Conservation scrap iron and steel.
Industrial scrap is carefully conserved for re-use. These gear blanks are part of the maintenance supplies pile at a large steel plant. They will be used to replace worn parts on rolling mill equipment or possibly remelted with other scrap. Allegheny Ludlum, 1941 Oct 1942.
LC website: fsa 8b01221 : LC-USE6-D-001795.

LC website: fsa 8b00431 : LC-USE6-D-000930; fsa 8b00432 : LC-USE6-D-000931.

Posters in use. Office of Emergency Management (OEM) production posters displayed on the pay shack of the Allegheny Ludlum Steel Corporation in Brackenridge. The construction in the back-
A heated ingot of steel is removed from the soaking pit. In this pit ground is a new addition to the electric furnace building at the plant. Between 1940 and 1946.

Steel Alloy Manufacture. Allegheny Ludlum Steel Corporation, Brackenridge [between 1940 and 1946]. America builds for its Arsenals of Democracy. Workers ramming in the bottom of a new thirty-five ton electric melting furnace which two days later was placed in operation to produce steel alloys from scrap iron and steel. This plant is being expanded at record speed to keep up with the even increasing needs of the national defense production program.

Converting scrap iron and steel into high quality alloy steel. A workman adds alloying materials to the bath of molten steel in one of the thirty-five ton electric arc furnaces. These furnaces give faster heating and more accurate temperature control than do open hearth furnaces.

General view of part of the plant where scrap iron and steel are converted into many grades of steel alloys. In the foreground are carloads of finished products, while in the middle foreground can be seen piles and cars of scrap coming in to feed the huge furnaces. In the background is the power house which supplies electricity and steam to turn the wheels of this important defense industry, set in the Pennsylvania hills about thirty miles north of Pittsburgh, one of America's most important steel producing centers.

Giant at rest. A repairman mends one of the huge ladles in which molten steel is conveyed from the electric furnaces to the ingot moulds.

A heated ingot of steel is removed from the soaking pit. In this pit ingots are thoroughly heated to the extremely high temperature required for conversion into slabs, billets or sheet bars for further conversion.

The huge carbon electrodes of the thirty-five ton electric melting furnaces used in converting scrap iron and steel into high quality alloy steels. A worker is adjusting the rings that guide the electrodes into the arc furnace. This is just one of the new furnaces under construction at this plant to meet the expanding need for alloy steels under the emergency created by the national defense production program.

Open hearth steel is also made at this plant. Raw materials are charged into an open hearth furnace by means of this charging mechanism. The open hearth furnaces have a capacity of about 100 tons of steel per heat.

Open hearth steel is also made at this plant. Workers are shown are completing the charge to an open hearth furnace which has a capacity of about 100 tons per heat. Only small quantities of materials are charged by hand in this way. The bulk of the material is charged by the mechanism shown in pictures nos. D-995 and D-994.

Power for the wheels of defense industry. The power house which generates all the steam required in this plant. The heavy wires in the foreground carry current to the electric melting furnaces.

Power for the wheels of defense industry. The stacks of the power house which generates all the steam required in this plant. The heavy wires in the foreground carry current to the electric furnaces used to convert scrap iron and steel into the many alloys required for national defense production.

Power for the wheels of defense industry. The throbbing heart of this plant where scrap iron and steel are converted into alloy steels for the national defense production program. Heavy wires carry current to the huge electric melting furnaces.

Quality in the manufacture of steel requires constant control and research. This chemist is weighing the elements of a steel alloy to determine its exact composition. Analysis is determined to 1/1000 of 1 percent of each element in alloy.
The rapid tempo of expansion necessary to meet the ever-mounting needs of the national defense production program. In the left foreground a newly completed electric melting furnace is already in operation as a construction crew puts the finishing touches on the furnaces beyond it. In the background additional plant structure is still being built. Electric melting furnaces provide faster melting of the steel bath and more precise control of temperature which is necessary in the processing of high quality alloy steels.

Refined alloy steel in the electric furnace, ready for casting into ingots. The slag layer on top of the molten steel prevents the hot steel from oxidizing, thereby preserving its high quality. Steel will be drawn off through the spout at the left into ladles in the pit. This is an operation that has rarely been photographed.

Thirty-five ton electric arc melting furnace in operation. These furnaces convert scrap iron and steel into high quality steel alloys. This type of furnace gives much faster heating and permits the accurate temperature control so necessary in the processing of the high quality steels. The alloying elements are being added to the bath of molten steel.

A white-hot ingot of steel is reduced to a slab on a two-high reversible type blooming mill. This slab will be converted further into either sheets or plates.

Steel manufacture: Allegheny-Ludlum [between 1940 and 1946]. Back into production go these carloads of scrap metal. The melting of alloy steels for defense work requires that steel mill scrapyards such as this be constantly filled. The overhead magnet deposits the scrap in a loader which carries it to the open hearth furnace. About fifty percent of scrap steel is used in open hearth production.

Refined alloy steel in the electric furnace, ready for casting into ingots. The slag layer on top of the molten steel prevents the hot steel from oxidizing, thereby preserving its high quality. This is an operation that has rarely been photographed.

Here is a row of charging boxes loaded with limestone, the main ingredient in the production of quality steel. These boxes will shortly dump their loads into open hearth furnaces.

Into the charging boxes goes this carload of scrap metal. Steel mills operating at capacity cannot afford to run short of these precious bits of cast away metal. The charging boxes foreground, will carry the scrap to the furnace for remelting.

It's the end of a short episode for this scrap steel accumulated from the croppings of tubing and piping right in the steel mill. This scrap will be charged into steel converters once again, and again will emerge as refined steel for industrial production. Steel mills themselves provide large portions of the scrap metal needed for production.

Lost heat is lost power, lost time and lost money. Furnaces for remelting and refining high quality steels and alloys are lined with refractory bricks such as these, made to withstand and to "reflect" terrific heat.
Peering through the peephole of a 25-ton electric furnace in which high quality alloy steels are being refined. Only with dark heavy glasses can meteors study the action of the boiling alloy steels and determine whether adjustments are necessary to the electric power, or whether additional material must be added to prevent too rapid oxidation.

LC website: fsa 8b00635 : LC-USE6-D-001192.

Pig iron such as this is a major ingredient of steel. Blast furnaces have smelted down the iron ore to obtain the pig iron used in all three types of steel furnaces: open hearth, Bessemer converter, and electric.

LC website: fsa 8b00657 : LC-USE6-D-001214.

Plant railways are essential to the working of large steel mills, especially since single furnaces are often charged with as much as 100 tons and more of raw materials for conversion into steel.

LC website: fsa 8b00654 : LC-USE6-D-001191.

Robert Poster, crane inspector at the Allegheny-Ludlum plant.

LC website: fsa 8b00665 : LC-USE6-D-001222.

The production of many tons of high quality steel depends upon the efficiency with which this electrician installs the power lines to new transformers used in conjunction with electric furnaces.

LC website: fsa 8b00664 : LC-USE6-D-001221; fsa 8b00660 : LC-USE6-D-001217.

A ribbon of hot steel rolls forth from high hot rolling mill, where it has been pressed down from about six to two inches in thickness. These ribbons are about thirty-five inches wide, and are used in coils or in cut lengths.

LC website: fsa 8b00642 : LC-USE6-D-001199.

A rigid schedule, though they don’t cover much ground. These men operate a locomotive inside the plant grounds, hauling scrap and other ingredients to the open hearth and electric furnaces for melting and refining.

LC website: fsa 8b00662 : LC-USE6-D-001219.

Sheets of finished stainless steel on their way to the warehouse and shipping rooms. All stainless steel for defense production is subject to rigorous inspection before acceptance.

LC website: fsa 8b00651 : LC-USE6-D-001208.

Shine your sheets, mister! This machine is used to polish the surface of stainless, to make it smooth and bright and clean. This is just one of the many units of special equipment required for the production of high quality steel for our defense needs.

LC website: fsa 8b00649 : LC-USE6-D-001206.

A slab of stainless is about to enter a three-high 110 inch plate mill, just having been removed from a heating furnace. This mill will roll the slab to produce the finish, thickness, width and length required for its use as tank armor.

LC website: fsa 8b00649 : LC-USE6-D-001202.

Steel couplings such as these are used to extend short lengths of pipe for many miles. Steel piping is used to convey solutions and gases in numerous plants engaged in defense production.

LC website: fsa 8b00655 : LC-USE6-D-001212.

Testing is an integral part of the work at the steel mills. Thousands of dollars worth of amazingly accurate testing machinery will be found in every mill, testing tensile strength, elastic limit, elongation and reduction of area. All steel is thoroughly tested before it is shipped out for defense production.

LC website: fsa 8b00621 : LC-USE6-D-001178.

These inspectors are trained to look for even the slightest imperfection in sheets of stainless such as this. All the high quality steel used in defense production is inspected and thrown back into the furnaces in case of any imperfection.

LC website: fsa 8b00650 : LC-USE6-D-001207.

These newly cast steel gear blanks will be used in new machinery for the refining and manufacturing of iron and steel. High quality alloys are needed for the machinery to produce steel.

LC website: fsa 8b00654 : LC-USE6-D-001211.

This doesn’t look very impressive, just a pile of rock. Well, that’s what it is, a pile of limestone, but since limestone is the main ingredient for the refining of high quality steels, heaps of rock such as these are mighty important factors in the maintenance of defense production.

LC website: fsa 8b00653 : LC-USE6-D-001190.

This is semi-finished material for finishing in steel mills and strip mills. The piles of rectangular pieces in the foreground are for steel mill production, while the coils behind them are destined
for the strip mill where they will be converted into thin gauge strips.

LC website: fsa 8b00659 : LC-USE6-D-001216.

This man is determined that there be no halt in production because of electrical power difficulties. He's a steel mill electrician, and his job is tremendously important in the maintenance of maximum efficiency throughout all the various processes of steel production.

LC website: fsa 8b00666 : LC-USE6-D-001223.

This quality steel tubing and piping will eventually be used to convey, refine or distill elements used in defense production. Expensive alloy steels are used, particularly for chemical piping. Special alloys have been devised to resist specific chemicals.

LC website: fsa 8b00653 : LC-USE6-D-001210.

This sheet mill worker is charging sheets of steel into the heating furnace, from which they will emerge to be rolled into thin gauge sheets.

LC website: fsa 8b00663 : LC-USE6-D-001220.

This slab of stainless steel is being rolled by a three-high 100 inch plate mill to bring it to the proper length, finish, thickness and width.

LC website: fsa 8b00646 : LC-USE6-D-001203; fsa 8b00647 : LC-USE6-D-001204.

To the left is a portion of the panels containing metering devices to record the operations of generators such as this, which power a rolling mill.

LC website: fsa 8b00622 : LC-USE6-D-001179.

Bradford
(see also Oil City)

Oil series
Oil for our machines of war is supplied by oil refineries like this one. Here are, left to right, the stabilizing, fractionating and heat exchange towers.

LC website: fsa 8b01257 : LC-USE6-D-001847.

Oil for the armies of democracy is stored in these huge tanks. This company refines much high-quality lubricating oil for the military machinery of the Army and Navy.

Ellwood City

Antiaircraft gun carriage series
AETNA. Ellwood City. December 1941. Lot 2026.
Assembling the elevating mechanism of a thirty-seven-millimeter antiaircraft gun carriage. This and other control mechanisms of an anti-aircraft gun mounting must operate as easily as your automobile controls so that the gunner may stay trained on his swiftly moving target. War program production scene in a Pennsylvania heavy industry plant.
Assembling the foot firing mechanism on a thirty-seven-millimeter antiaircraft gun carriage. The gunner requires both hands to follow his swiftly moving target, and must get in as many shots as he can while the target is still within range. War program production scene in a Pennsylvania heavy industry plant.

A huge stockpile of equilibrator springs awaits assembly into the carriages. War program production scene in one of Pennsylvania's heavy industry plants now converted to the production of vitally needed military equipment.

A leveling socket for a thirty-seven-millimeter antiaircraft gun carriage. War program production scene in a Pennsylvania heavy industry plant now converted to the production of vitally needed military equipment.

Paint for protection and for camouflage. This masked operator is painting parts that will be assembled into a thirty-seven-millimeter antiaircraft gun carriage. War program production scene in one of Pennsylvania's heavy industry plants now converted to the production of vitally needed military equipment.

Thirty-seven-millimeter antiaircraft gun carriages come down the assembly line. In the foreground, the frame for the carriage is assembled. War production program scene in a Pennsylvania heavy industry plant now converted to the production of vitally needed military equipment.

This master machinist lays out the precision parts that go to make up a thirty-seven-millimeter anti-aircraft gun carriage. Swift flying planes present a difficult target, the anti-aircraft gun must be a precision instrument. War program production scene in one of Pennsylvania's heavy industry plants now converted to the production of vitally needed military equipment.

Time is short! Workers take a few precious minutes for some much needed refreshment from the plant lunch wagon. At the left a thirty-seven-millimeter antiaircraft gun carriage is nearing completion on the assembly line. War program production scene in a Pennsylvania plant.
The top carriage of a thirty-seven-millimeter antiaircraft gun carriage receives the final assembly operations. War program production scene in one of Pennsylvania's heavy industry plants now converted to the production of vitally needed military equipment.

As the wall sheathing is completed, men are already starting the sheeting of the roof.

Applying asbestos cement composition shingles to the exterior of houses at the Franklin Terrace Defense Housing Project, Erie, July 1941.

Note: Not seen on LC website or microfilm.

A worker inspects the dimensions of a huge turning roll that will soon be installed in one of our steel mills to increase the production of steel plate and sheet to supply the tanks, ships and gun parts that are required under our expanded war program. A scene in one of Pennsylvania's heavy industry plants now converted to the production of vitally needed military equipment.

As the wall sheathing is completed, men are already starting the sheeting of the roof.

Applying asbestos cement composition shingles to the exterior of houses at the Franklin Terrace Defense Housing Project, Erie, July 1941.

Erie

Bernie Rogan, son of Mr. and Mrs. B. J. Rogan, in the bathroom of the Rogan's new defense home at the Franklin Terrace housing project in Erie, Pennsylvania. His father is a drill press operator at the nearby plant of the General Electric Company, which is working three shifts on defense contracts.

A built-up flat roofing is applied to the individual unit. Here workmen are laying the last covering before the finished coat.
A few of the recently completed homes for defense workers in Erie, Pennsylvania. Actual construction on these homes started in the latter part of April, 1941. By the first of July, sixty were completed, with scheduled completion of the other 244 by October.

The entire floor-laying operation on Franklin Terrace Defense Housing Project, Erie, Pennsylvania. Actual construction on these homes started in the latter part of April, 1941. By the first of July, sixty were completed, with scheduled completion of the other 244 by October.

Each trailer in this defense workers' camp has a 25 x 30 foot plot of ground, and is equipped with a gasoline pressure stove, ice box, davenport beds, and gate leg tables. The central utility building (right) has toilets, showers, and laundry facilities for sixty trailers. The Central utility building, Erie, Summer 1941(?).

The entire floor-laying operation on Franklin Terrace Defense Housing Project, Erie, Pennsylvania. Actual construction on these homes started in the latter part of April, 1941. By the first of July, sixty were completed, with scheduled completion of the other 244 by October.

The entire framework for houses in the Franklin Terrace Defense Housing Project is completed between 8:30 and noon. Another crew of forty men raises the framework, supplies stud frames, floor joists, etc. and finishes by 4:30, Erie, July 1941.

The filling materials are carefully rolled to provide a firm foundation for the paved streets.

Electricians wiring defense homes at Franklin Terrace housing project. Defense homes are provided with electricity, sewage, police and fire protection. In many cases, a lump sum for all services is paid to the city in lieu of taxes.

The entire floor-laying operation on Franklin Terrace Defense Housing Project is accomplished in a few hours. Asphalt paper is spread over a cinder filling. Later wire reinforcements for the cement floor are added.

George Miller, plumber, is foreman of the central plumbing assembly shop. He and his helpers assemble most of the plumbing for this 300-unit defense housing project.

A good filling bed of rock-like material is laid on the graded street surface.

The entire framework for houses in the Franklin Terrace Defense Housing Project is completed between 8:30 and noon. Another crew of forty men raises the framework, supplies stud frames, floor joists, etc. and finishes by 4:30, Erie, July 1941.

In tight corners the old hand saw still finds a spot. Pre-fabricating is not carried to time-wasting extremes, and there are a few places where hand cutting on the spot can do the job faster.

Interior of administration building at trailer site. Milton Ackerman (right), project manager, reviews applications of prospective trailer residents while an assistant sorts mail for trailer tenants.

Interior of the laundry of one of the central utility buildings of the defense trailer camp at Erie, Pennsylvania. Complete laundry facilities, including tubs, ringers, ironing boards and drying lines are provided. Also located in the building are showers, wash basins, and toilets. All facilities are included in the weekly trailer rental of $6.00 per week.

Interior of defense homes are attractively finished. Although economy is imperative, no jerry-building or shoddy construction is allowed.

J. P. Kane, defense housing project manager at the Franklin Terrace project, explains the forced-air heating system of a defense home to B. J. Rogan, worker in the General Electric plant at Erie, Pennsylvania.

Leveling-off process between cement foundation blocks preparatory to receiving cinder filling. Cement floor will later be poured over with reinforcements.

A member of the Visiting Nurse Association pays a call to one of many young tenants of the defense trailer camp. High standards of sanitation are maintained, and every precaution is taken to guard against epidemic and disease.

Milton Ackerman, manager of the Defense Trailer Project at Erie, Pennsylvania, receives an application from Mrs. George Cole. Her husband is employed in the General Electric plant, which holds large defense contracts. Seated at the desk is Ackerman’s assistant, who handles mail, and telephone inquiries for tenants.

Modern bathrooms are speedily installed in the 300 defense homes at the Franklin Terrace housing project.

Modern bathrooms and kitchens are speedily installed in the 300 defense homes at the Franklin Terrace housing project. Here kitchen cabinets and shelving are carried in.

Mr. Rogan is a drill press operator at a nearby plant which is working three shifts on defense contracts. Mr. Rogan earns $42.50 a week, and spends about twenty percent of his income for rent.

Mrs. B. J. Rogan and young son inspect the gas operated refrigerator of their new defense home, while J. P. Kane, housing manager, looks on. July 1941.

Mrs. B. J. Rogan in the bedroom of the Rogan’s new war home at the Franklin Terrace housing project in Erie, Pennsylvania. Mr. Rogan is a drill press operator at a nearby plant which is working three shifts on defense contracts. Mr. Rogan earns $42.50 a week, and spends about twenty percent of his income for rent.” The actual photograph shows Mr. Rogan sitting in his living room reading the paper. The caption for this photograph is derived from the second part of the wrong caption.

Mrs. B. J. Rogan and young son inspect the gas operated refrigerator of their new defense home, while J. P. Kane, housing manager, looks on. July 1941.

Mrs. B. J. Rogan in the bedroom of the Rogan’s new war home at the Franklin Terrace housing project in Erie, Pennsylvania. Her husband is a drill operator at the near by General Electric Company plant, which is working three shifts on defense contracts.

Mrs. H. Henry Colomy, Jr., is the beauty expert at the trailer camp. She does not charge for her services, and young housewives return her kindness by taking care of Mrs. Colomy’s young son when she does her weekly shopping, or sometimes in the form of gifts. The husbands of both Mrs. Colomy and Mrs. Rogan (seated) are employed at the General Electric plant in Erie, Pennsylvania.

Note: Wrong caption applied to this photograph: “Mrs. B. J. Rogan and her small son, Bernie, in the kitchen of the Rogan’s new war home at the Franklin Terrace housing project in Erie, Pennsylvania. Mr. Rogan is a drill press operator at a nearby plant which is working three shifts on defense contracts. Mr. Rogan earns $42.50 a week, and spends about twenty percent of his income for rent.” The actual photograph shows Mrs. Rogan sitting in her living room reading the paper. The caption for this photograph is derived from the second part of the wrong caption.
One part of the crew sheets the flooring as the walls are going up. The progress of the work is checked frequently against the working blueprints.

LC website: fsa 8b00575 : LC-USE6-D-000872.

Painters finished up window frames on defense homes in Erie, Pennsylvania. No painting is required on the cement-asbestos shingles, since their natural finish is light, durable and attractive.

(see also Bradford)

Quaker State Refining Company series

Oil City. September 1941. Lot 2051. The best is none too good for the mechanized divisions of our Army and Navy. These are distillation units with run-down and coal storage tanks in the foreground. LC website: fsa 8b01274 : LC-USE6-D-001864.

It’s highly skilled work, seeing to it that the oil refined for our military machines is of the highest quality. This worker is inspecting the solution tower for denaphthizing bright stock. LC website: fsa 8b01281 : LC-USE6-D-001871.

These are the solution and vacuum towers. This refinery is working at full capacity to assure our military forces of ample supplies of the high-grade lubricants needed to operate ships, guns, tanks, and planes. LC website: fsa 8b01279 : LC-USE6-D-001869; fsa 8b01280 : LC-USE6-D-001870.
Philadelphia
[Note: Some photographs of the Frankford Arsenal are placed by LC in Frankford, and others in Philadelphia. Location is Philadelphia.]

Mother of the assembly line. Clip spring and body assembly for .30 caliber cartridges at a large eastern arsenal. Frankford Arsenal, Philadelphia, Pennsylvania. 1942?

Philadelphia Vicinity  
(see also Reading)
On many Pennsylvania commuter trains in the Philadelphia area, trainmen are relieved for service in the Armed Forces and replaced by women, Reading (vicinity), 1943(?).
LC website: LC-Usw 3-025828-C.  
Fiche no. 91: LC-Usw 3-25828.  
Microfilm: Lot 969, Reel 61.  
Note: “Near Reading” handwritten on fiche caption. LC indicates no digital image available. Image available on fiche and microfilm.

Pittsburgh
“A poster comes to life” series
Allegheny Ludlum Steel Corp. Pittsburgh, August 1942. Lot 1895. An arm that’s taking a crack at the Axis.
LC website: fsa 8b03995 : LC-USe6-D-005631.

Another democratic institution, beer and pretzels. Chief radioman Evans, at extreme left, reached for a slice of the ham which Mrs. Woolslayer is serving. Sergeant Vineyard is wearing the paper hat.
LC website: LC-USe6-D-005654.  
Note: LC indicates no digital image available.

A gathering place for many of the workers is the local union headquarters. Woolslayer took his service friends there to “meet the boys”
LC website: fsa 8b04009 : LC-USe6-D-005655.

Into this fifty-ton electric furnace at Allegheny-Ludlum, steelworkers load scrap materials which will be “cooked” into high alloy steel for America’s ships and guns and tanks.
LC website: fsa 8b03966 : LC-USe6-D-005599.

The three men watch the beginning of a tapping operation on a small (thirty-five ton) electric furnace.
LC website: fsa 8b04004 : LC-USe6-D-005649.

Woolslayer interrupts the tour to chat with one of the plant guards, a veteran employee. The poster was designed by the same government office responsible for the “Men Working Together” poster.
LC website: fsa 8b04010 : LC-USe6-D-005656.

Reading  
(see also Philadelphia Vicinity)
[Note: These photographs are brought together in Microfilm Lot 969, Reel 61, under the rubric “Women in war industry and replacing men in wartime jobs.” Not all of the photographs identify the place as “Reading,” but within the context of the numbering of negatives they may all be “Reading” photographs.]

Kathryn M. Miller, first woman to be employed as a laborer at the Reading Company general stores. She is the first to qualify as an operator of the tricky electric trucks which move loads about the busy platforms in the local yard. She is a former hosiery mill employee and says she doesn’t mind the cold at all, 1943(?).
LC website: LC-Usw 33-025822-C.  
Fiche no. 91 : LC-Usw 33-25822-ZC.  
Microfilm: Lot 969, Reel 61.  
Note: LC indicates no digital image available. Image available on fiche and microfilm.

May M. Link, working at the anvil straightening bolts for redam tion. She can tell the size of the bolts, too, merely by looking at them, Reading, 1943?
LC website: LC-Usw 3-025825-C.  
Fiche no. 91 : LC-Usw 3-25825-ZC.  
Microfilm: Lot 969, Reel 61.  
Note: LC indicates no digital image available. Image available on fiche and microfilm.
Mrs. Esther Henderson (left) of Lyons Station, and Mrs. Orville Sloyer, unloading bales of insulating material for storage in the lumber shed, 1943(?).
LC website: LC-USW33-025824-C.
Fiche no. 91: LC-USW33-025824-ZC.
Microfilm: Lot 969, Reel 61.
Note: LC indicates no digital image available. Image available on fiche and microfilm.

Mrs. Maude T. Henry, of Mohrsville, operating a lift jack preparatory to moving a load of car journal bearings, 1943(?).
LC website: LC-USW33-025826-C.
Fiche no. 196: LC-USW33-025826-ZC.
Microfilm: Lot 969, Reel 61.
Note: LC indicates no digital image available. Image available on fiche and microfilm.

A switchtender on the Pennsylvania Railroad helping to classify freight trains at a large eastern freight yard. The electric controls on the board actuate rail switches in the yard. She is taking the place of a man now in the Armed Forces, 1943(?).
LC website: LC-USW33-025829-C.
Fiche no. 91: LC-USW33-025829-ZC.
Microfilm: Lot 969, Reel 61.
Note: LC indicates no digital image available. Image available on fiche and microfilm.

Women war workers, 1942(?)
LC website: fsac135076 : LC-USW36-950.
Note: This is a color photograph. LC website provides no other information than that this is a Pennsylvania photograph. Not seen on fiche or microfilm. LC website also indicates B&W photograph is in Lot 12002-28.

Women workers on the Reading Railroad, 1943(?).
LC website: LC-USW33-025820-C, LC-USW33-025823-C.
Fiche no. 91.
Microfilm: Lot 969, Reel 61.
Note: LC indicates for 25820-C, 25823-C no digital image available. Images available on fiche and microfilm.

Sharon
Transformer manufacture series
Before transformer coils are wound, condenser plates must be inspected. These transformers are vital to war production and are used to produce power in almost every phase of America's war effort.
LC website: fsa8b02105 : LC-USW6-D-002875.

Checking the rigging of big power transformers is a skilled job and one that's extremely important to America's war effort these days. Transformers are essential to almost every phase of war production.
LC website: fsa8b02107 : LC-USW6-D-002877.

Checking stock of distribution transformer coils in large Eastern plant. With enormously increased production all over the country as a result of war contracts, these coils are intrinsically important to America's war program.
LC website: fsa8b02085 : LC-USW6-D-002854.

Essential to the efficiency of thousands of plants producing war materials are these distribution transformers, here being assembled on assembly line in a large Eastern plant.
LC website: fsa8b02083 : LC-USW6-D-002852.

Fitting up outer parts of giant transformers is one of the skilled jobs done by employees of a large Eastern electrical company. The demand for power transformers has increased in proportion to America's ever-increasing war production.
A large Eastern electrical company where huge power transformers, vital to America's war program, are produced. Power transformers are an important part of America's war effort.

For many years this employee of a large Eastern electrical company has been winding low voltage coils for power transformers. He's become one of Uncle Sam's valued workers, because transformers are essential to almost every phase of the armament program.

Note: LC indicates no digital image available. Not seen on fiche or microfilm.

Spools of copper wire used in transformer manufacture.

The ever-increasing production of ships and tanks and guns is necessary to America's war program; production of these demands hundreds of thousands of transformers to convert electric current into power. Pretty Betty Llewelyn winds coils for distribution transformers in a large Eastern plant.

These bus bars are made primarily of copper; they're part of the workings of giant transformers which are necessary to war.

These large transformers are being prepared for testing in a large Eastern plant given over almost entirely to the manufacture of transformers. Transformers are vital to almost every phase of war production.

This employee of a large Eastern electrical plant has the job of getting these big cores and coils into shape before they are lowered into steel transformer tanks and immersed in oil.

Veteran coil winders of a great electrical plant check stacks of finished coils, the kind that are found in small distribution transformers on light poles throughout the country.

Welding is an intrinsic part of the manufacture of transformers. This welder is employed by a large Eastern electrical company whose power transformers are needed by many factories engaged in war production.

Part of a large Eastern electrical plant where large transformer tanks are shaped and welded. Power transformers are an important part of America's war effort.

Note: LC indicates no digital image available. Not seen on fiche or microfilm.

**Alfred Palmer or George Danor**

**East Pittsburgh**

Citations of individual production merit awarded. The first five Citations of Individual Production Merit have been awarded to five war workers, War Production Drive Headquarters has announced. The citation is the highest honor conferred for individual achievement. It is granted only for ideas or suggestions that have an outstanding effect on the entire war effort. Clinton R. Hanna, East Pittsburgh, Pennsylvania, a research department manager for the Westinghouse Electric & Manufacturing Co., suggested a method of increasing the effectiveness of Army tanks. This method is a military secret. 1942.
Coal mining is serious business, an army sergeant learns from two anthracite miners as they prepare to descend into the mine. At Pennsylvania miners' rallies, on September 28th through October 1st, servicemen learned how hard coal is extracted beneath the earth's surface.

A fighting tool of the production front is this pneumatic drill that anthracite miners use to produce hard coal. Servicemen learned how anthracite is mined at a miners' rally in Hazleton, Pennsylvania. Anthracite miners' rallies were held in four Pennsylvania cities from September 28th through October 1st.

How the mines contribute to the nation's scrap pile was demonstrated by an enthusiastic miner during an anthracite rally, one of four held in Eastern Pennsylvania, September 28th through October 1st. October 1942.

LC website: fsa 8b09762 : LC-USE6-D-006649; fsa 8b07648 : LC-USE6-D-006650; fsa 8b07837 : LC-USE6-D-007880; fsa 8b08659 : LC-USE6-D-010744. Lot 1947.

A lively discussion resulted when labor and management talked over production problems of the anthracite industry in Pennsylvania. This is one of the many labor-management anthracite committees in the state. Anthracite miners' rallies were held in four Pennsylvania cities, September 28th through October 1st.

A lucky miner who received a $100 war bond at one of the four anthracite miners' rallies in Eastern Pennsylvania on September 28th through October 1st. Only miners with 100% work attendance could participate in the drawing.

Miners and soldiers at the Pennsylvania anthracite rallies, September 30th through October 1st, learned what each is doing to help win the war. Two miners enjoy a ride in an army jeep.

No jeep, this underground car in a Pennsylvania anthracite mine. Soldiers learned how hard coal is mined at the anthracite min-
Servicemen working together! Soldiers, sailors and marines went into Pennsylvania mines during the anthracite rallies, September 28th through October 1st, and saw how hard coal is extracted from beneath the earth's surface.

Smiling with pleasure, a coal miner reads the paycheck enclosure which explains the importance to the war effort of all-out production. He extracts anthracite, or hard coal, from an Eastern Pennsylvania mine.

A soldier is shown how a miner swings a pick under a low ceiling in a Pennsylvania anthracite mine. Soldiers, sailors and miners attended the anthracite miners' rallies in Scranton, Wilkes-Barre, Hazleton and Mount Carmel, Pennsylvania, September 28th through October 1st.

A soldier wears a miners' cap and lamp before he descends the shaft into the mine. Servicemen at the four anthracite rallies in Eastern Pennsylvania, September 28th through October 1st, saw first-hand how hard coal is mined.

Soldiers and sailors learned how miners produce anthracite at rallies held in Eastern Pennsylvania, September 28th through October 1st. Cities that participated were: Scranton, Wilkes-Barre, Hazleton, and Mount Carmel.

War production drive. Anthracite rallies. The war is serious business to these representatives of the fighting and production fronts. Servicemen learned how hard coal is extracted from Eastern Pennsylvania mines at the anthracite rallies held September 28th through October 1st. October 1942.

Hazleton
Alex Nordholm, Chief of Field Operations, War Production Drive, addressed servicemen and miners at the anthracite rally in Hazleton, Pennsylvania. Anthracite miners' rallies were held in four Pennsylvania cities, September 28th through October 1st.

Soldiers march in formation at the anthracite miners' rally in Hazleton, Pennsylvania. During the day miners showed the soldiers and sailors how hard coal is mined. Miners' rallies were held in four Pennsylvania anthracite area cities from September 28th through October 1st.
“I pledge allegiance to my flag...” Corporal Bennick led the crowd in the oath of allegiance at the rally for anthracite miners in Wilkes-Barre, Pennsylvania. Anthracite miners’ rallies were held in four Pennsylvania cities September 28th through October 1st. LC website: fsa 8b06864 : LC-USE6-D-010751. Lot 1947.

Jeep headlights form V for victory at the night rally for Pennsylvania anthracite miners in Wilkes-Barre on September 29th. Similar rallies were held in other anthracite area cities from September 28th through October 1st. LC website: fsa 8b06869 : LC-USE6-D-010766. Lot 1947.

Nurse Anne Bernatitus spoke to anthracite miners on the crucial need for more coal production, at the anthracite rally in Wilkes-Barre, Pennsylvania, her hometown. The rally was one of four held in Eastern Pennsylvania cities, September 28th through October 1st. LC website: fsa 8b06853 : LC-USE6-D-010734. Note: See also entry on Anne Bernatitus under Eastern Pennsylvania.

The following members and alternates attended the first meeting of the War Production Board (WPB), held January 20th, 1942, in the conference room of the new Social Security building. Seated, left to right: Jesse Jones, Federal Loan Administrator; Frank Knox, Secretary of the Navy; Donald M. Nelson, Chairman of the Board; Henry A. Wallace, Chairman of the Board of Economic Welfare. Between 1941 and 1943. LC website: fsa 8b06997 : LC-USE6-D-010796. Lot 1947. Note: LC places photograph in Pennsylvania, no city indicated, but other photographs in the LC website indicate new Social Security Building with January 1942 date.

H. Armstrong Roberts
Philadelphia
Cars parked in outdoor lot in industrial section, Philadelphia, 1937. Fiche no. 28: LC-USW 33-23825-ZC. Note: Original date typed in caption, 1930-35(?), crossed out and 1937 pencilled in. Also has No. T 916. Not seen on LC website or microfilm.

Foxhill Farm, Pennsylvania? Between 1930-35? LC website: fsa 8c51639 : LC-USF 341-000591-ZB. Fiche no. 21: Resettlement Administration negative RA 591-ZB. Note: Fiche does not indicate photographer. LC also indicates that a print is also on Lot 1356-A.

Ann Rosener
Gasoline rationing. The busiest spot on the Pennsylvania turnpike. Eastbound motorists stop at this service station for a very good reason: it's the last chance to fill up before entering a gas-rationed area. September 1942. LC website: fsa 8b07392 : LC-USE6-D-006024. Note: Not seen on fiche.

Gasoline rationing. A pre-war sign gives unnecessary warning to wartime motorists—whenever there are any—any weekday-traffic on the Pennsylvania Turnpike hits new lows, September 1942. LC website: fsa 8b07393 : LC-USE6-D-006025. Fiche no. 20 : LC-USW 3-D-60625.

Transportation. Freight car movements. With transportation assuming vast new importance in wartime America, movement of freight cars must be accomplished with the fullest efficiency and speed. Loss and diversion of ocean carriers which served our seaboard cities have thrown an enormous burden upon the railroads. Pittsburgh, September 1942. LC website: fsa 8b07398 : LC-USE6-D-006031; fsa 8b07399 : LC-USE6-D-006031. Note: Caption information does not indicate place, but LC indicates “Pittsburgh” in subject area.

War nursery schools. Philadelphia, Pennsylvania. Picture books, blocks, modeling clay, story hours, music, for the pre-school chil-
dren of war working mothers. War nurseries are generally to be
under trained supervisory personnel and will be operated in
connection with the public schools in communities of intense
industrial production. February 1943.
LC website: fsa 8b06581 : LC-U5E6-D-010157.

War nursery schools. Scranton, Pennsylvania. These youngsters
may not be able to sing an aria but they are having a good time
in a war nursery school in Scranton, which is one of four in
this community. Child care centers meet a critical need for
supervised care of children of mothers employed in war work.
February 1943.
LC website: fsa 8b06578 : LC-U5E6-D-010154.
